Exp 5: Building Reports, Dashboards, and Custom Pages (UI Builder) for the Gym Membership Application in Zoho Creator

1. Aim

To extend the Gym Membership Enrollment application built in Exp 4 with a set of reports, a dashboard, and a custom page designed in Zoho Creator's UI Builder, so that the front desk and trainers can browse enrollments in a list, track members by membership plan on a Kanban board, see upcoming start dates on a calendar, and monitor the membership mix and headline figures from a single landing page, without opening the form or the raw data tables.

2. Procedure

2.1 Reporting Requirements and Components

In the enrollment workflow, the front desk has to answer a few recurring questions: who has enrolled, which plan each member chose, who is starting when, and how the membership types are split. Each question was mapped to a Zoho Creator report or page component, as shown in Table 1. All components read from the same enrollment form, so no data is duplicated.

Requirement	Component name	Zoho Creator component	Data used
Browse and search every enrollment	Member_Name Report	List report	Member name, membership type, email, contact number and other form fields
Track members by plan	gym report	Kanban report	Grouped by Membership_Plan (Monthly, Quarterly, Annual, Deleted & Others)
See who starts when	Upcoming_Start_Dates	Calendar report	Preferred_Start_Date, with the member name as the event title
Understand the membership mix	Two doughnut charts	Chart widgets on a page	Count of records grouped by Membership_Type
Show headline figures	Two KPI tiles	KPI widgets on a page	Approvals pending; Requests declined
One landing screen	Custom dashboard page	Page built in UI Builder	Charts, KPIs, the enrollment form and the list report together

Table 1: Reporting requirements mapped to Zoho Creator components

2.2 List Report

The list report, **Member_Name Report**, is the main tabular view of submitted enrollments. It shows one row per member with columns such as Member Name, Membership Type, Email Address and Contact Number (phone numbers are shown as clickable links, and email addresses as mail links). The built-in search and filter options let the front desk find a member quickly, and the + button adds a new record directly from the report.

2.3 Kanban Report: Members by Plan

A Kanban report named **gym report** was created on the enrollment form and grouped by **Membership_Plan**. Each plan becomes a column and each member becomes a card showing the member name and a numeric detail field. Records whose plan is blank or no longer matches a choice fall into an automatic **Deleted & Others** column. This gives the front desk a visual way to see how the plans are distributed and to assign trainers plan by plan.

2.4 Calendar Report: Upcoming Start Dates

A calendar report named **Upcoming_Start_Dates** was created with **Preferred_Start_Date** as the date field and the member name as the event title. It offers Month, Week and Day views, so the front desk can see which days will bring new members and prepare trainers and lockers in advance. Clicking an event opens a small card with the member's details.

2.5 Custom Dashboard Page (UI Builder)

A custom page was built in the UI Builder to bring the individual components together on one screen. The page uses a two-row layout: the top row holds the charts and KPI tiles, and the bottom row embeds the live enrollment form beside the list report. Table 2 lists the widgets placed on the page.

Widget	Type	Source	What it shows
Doughnut chart 1	Chart	Enrollment form, Membership_Type	Number of members in each membership type, with count callouts
Doughnut chart 2	Chart	Enrollment form, Membership_Type	The same split as a share of the whole, in a different colour scheme
Approvals pending	KPI tile	Configured value	Headline figure (25)
Requests declined	KPI tile	Configured value	Headline figure (10)
Enrollment form	Embedded form	Enrollment form	Sections Member Info and Personal Details, for adding a member from the page
Member_Name Report	Embedded report	List report	Live list of all submitted enrollments

Table 2: Widgets placed on the custom dashboard page

The new reports and the page were then added to the application menu, so the front desk reaches every view from the left-hand navigation: *Member_Name* (form), *Member_Name Report* (list), *gym report* (Kanban), *Upcoming_Start_Dates* (calendar) and the dashboard page.

3. Output

The following figures show the finished dashboard page, the Kanban report and the calendar report running in the live application, using the sample member records entered during testing.

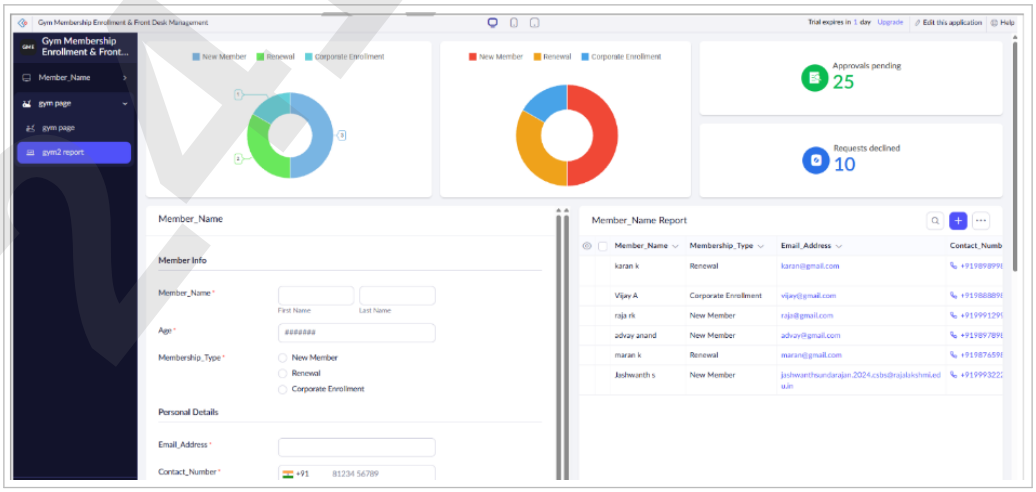

Figure 1: Custom dashboard page with doughnut charts, KPI tiles, the embedded enrollment form and the embedded list report

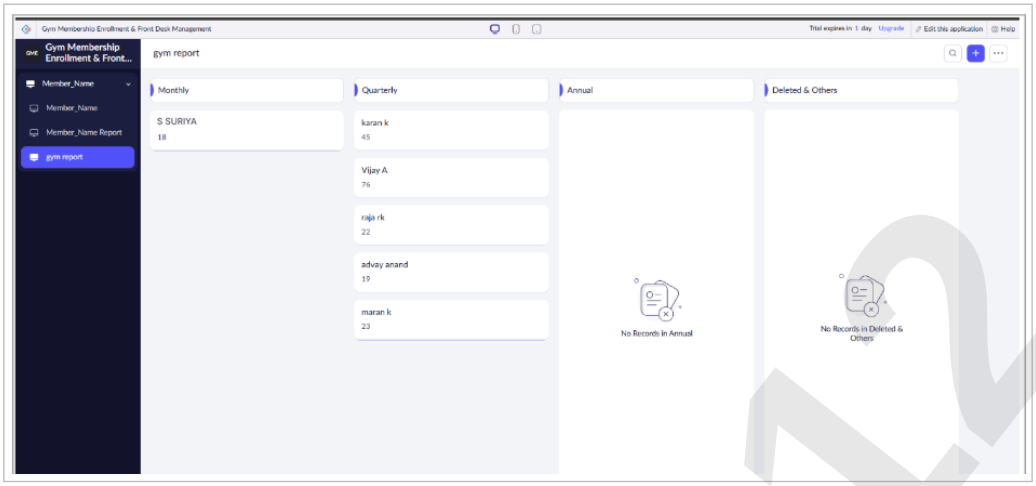

Figure 2: Kanban report "gym report" grouping members by Membership_Plan

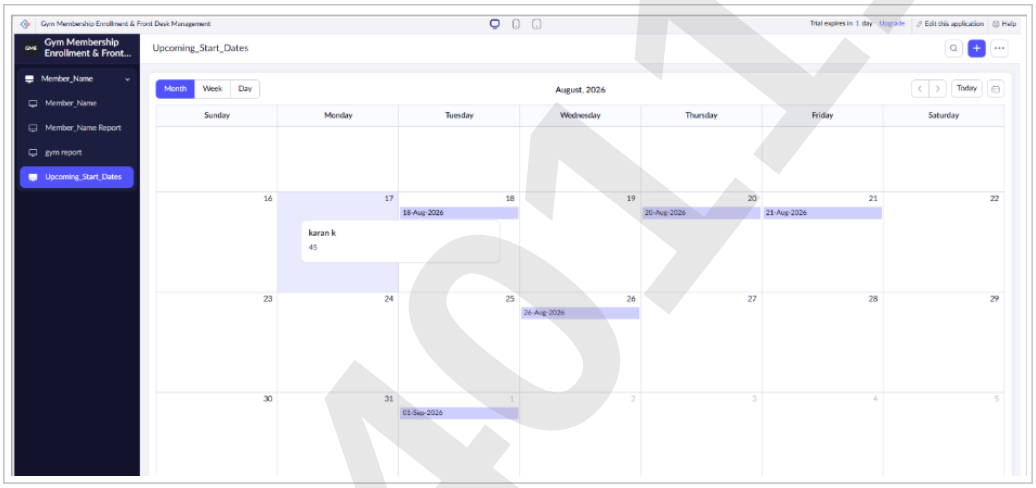

Figure 3: Calendar report "Upcoming_Start_Dates" for August 2026 showing preferred start dates

Observations from the output

- The doughnut charts show New Member as the largest group (3 members), followed by Renewal (2) and Corporate Enrollment (1), which matches the rows visible in the embedded list report.
- On the Kanban board the Quarterly column holds the most members, the Monthly column has one, and the Annual column is empty.
- The calendar marks preferred start dates on 18, 20, 21 and 26 August and on 1 September 2026, so the front desk can see that most joins fall in the second half of August.
- The form embedded on the page lets staff add a member without leaving the dashboard, and the list report refreshes with the new record.

4. Result

A list report, a Kanban report, a calendar report and a custom dashboard page were successfully built in Zoho Creator for the Gym Membership application. Together they let the front desk search enrollments, track members by plan, plan for upcoming start dates and monitor the membership mix from a single page, meeting the requirements of reports, dashboards and custom pages for this experiment.
